

Plastering

Building A Better Environment

If you are involved in the building industry, you are required to provide the right circumstances necessary to reduce any environmental impact as a result of the building process.

All building work must be carried out in a way to stop the entry of any pollution into the stormwater system.

The following hints are aimed at building activities and trades involved on a typical building site.

Plastering

Plastering waste and wash waters must not be discharged into the stormwater system.

All residues and wastes from plastering activities should be allowed to dry within a contained area on site.

Solid waste should be disposed of in a solid waste bin on site.

Mix up only the materials that you need and use all that is made up.

Store materials to prevent physical or weather damage.

Litter

Ensure all litter is stored on site to prevent any materials from entering the stormwater system or neighbouring land through either wind or water action.

WARNING: On the spot FINES apply
